DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 17-21 are rejected under 35 U.S.C. 102(b) as being anticipated by Weisser, Jr. et al. (U.S. Patent No. 5,600,710).

Regarding claim 17, Weisser, Jr. et al. teach a method of permitting customized end-user interaction with a call service in an intelligent network, comprising:

collecting user input information needed to establish the call service (Fig. 2A, 100);
providing the collected user inputs to a service control point associated with the call service (Fig. 2A, 150); and

outputting information associated with the call service with respect to a given user through a set of configurable parameters at a customized intelligent peripheral unit thereby enabling play out of output information through a standardized interface in different formats dependent on a given user (column 9, lines 7-40 and column 10, lines 8-22).

Regarding claim 18, Weisser, Jr. et al. further teach the method wherein collecting user input information comprises collecting one or more of DTMF tones, analog pulses, and verbalized speech (column 5, lines 6-8).

Art Unit: 2642

Regarding claim 19, Weisser, Jr. et al. further teach the method wherein outputting information comprises outputting at least one of a recorded message and spontaneously-generated speech (column 10, lines 57-61).

Regarding claim 20, Weisser, Jr. et al. further teach the method wherein outputting spontaneously-generated speech comprises concatenating a string of recorded speech segments (column 10, lines 32-37).

Regarding claim 21, Weisser, Jr. et al. further teach the method wherein outputting information associated with the call service in a manner customized with respect to a given user comprises outputting information having a form corresponding to the given user's geographic location (column 9, lines 34-41).

Response to Arguments

3. Applicant's arguments filed October 29, 2004 have been fully considered but they are not persuasive. Applicant states that Weisser does not specifically teach or provide guidance towards a customized intelligent peripheral because service control point stores the indicia and not the intelligent peripheral. Examiner respectfully disagrees. Clearly, Weisser teaches that the intelligent peripheral such as service node 39 of Fig. 3 can store "Advertise-on-busy" service parameters instead of service control point (column 10, lines 8-22).

Conclusion

4. This is a continuation of applicant's earlier Application No. 09/845,810. All claims are drawn to the same invention claimed in the earlier application and could have been finally

Art Unit: 2642

rejected on the grounds and art of record in the next Office action if they had been entered in the earlier application. Accordingly, **THIS ACTION IS MADE FINAL** even though it is a first action in this case. See MPEP § 706.07(b). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no, however, event will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
